CAREER SUMMARY

Data-focused Developer and Analyst with 5+ years of experience in blockchain, DeFi, and prediction markets. Skilled in building analytics pipelines, managing data warehouses, and creating real-time dashboards using on-chain and off-chain data. Experienced in designing ETL systems, normalizing data from multiple providers, and maintaining scalable data infrastructure for Web3 applications. Hands-on background across the full data stack, from database design to analytics visualization, with additional experience in dApp development and product analysis. Comfortable working independently in lean, async-first teams.

TECHNICAL SKILLS

Languages & Analysis: SQL (Advanced querying, optimization, schema design), Python (Data processing, Pandas, ETL, scripting), JavaScript, TypeScript, Java (Core, Spring Boot).

Data & BI: MySQL/PostgreSQL, Elasticsearch, Redis, data warehousing, dashboard and reporting development (Mode Analytics, Tableau, Power BI).

Web3 & Markets: On-chain data analysis, Blockchain indexing (Solana, Ethereum, Base, Arbitrum), Prediction market data normalization, Market trend & user behavior analysis, DeFi protocols.

Tools & DevOps: Docker, Git, RESTful APIs, WebSockets, ETL pipeline design, data aggregation systems.

RELEVANT PROFESSIONAL EXPERIENCE

Coresightbot

Nov. 2024 - Present

Lead Developer

- Built a multi-chain data indexing engine in Java to support DeFi research for over 8,000 users across Solana, Arbitrum, Ethereum, and Base.
- Developed an alpha detection system that scans Solana to deliver top-running tokens, achieving a 78% win rate and successfully calling tokens that yielded 300x, 400x, and 500x returns (including \$kabuto, \$neo, and \$yaranaka).
- Created "CORA," an autonomous trading agent that allows users to automatically execute trades on alpha alerts using preset conditions tailored to their specific trading strategies.
- Secured a competitive development grant from Superteam by demonstrating technical scalability and robust code quality.

Predictify

Jan 2026 - March 2026

Developer/Data Analyst

- Built a data normalization engine to standardize inconsistent schemas and status flags from 5+ prediction markets (including Polymarket and Kalshi), enabling clean data aggregation for the frontend.
- Created a market filtering and "Closed Market" detection system that parses multiple date and status formats, helping traders easily identify active opportunities.
- Developed a market discovery UI using Next.js, implementing custom state-driven sorting to resolve pagination bottlenecks and manage thousands of real-time market rows smoothly.

Nirvana Academy

April 2025 - December 2025

Tutor, DeFi Operations and Analytics

- Taught 650+ students how to translate complex blockchain events into structured SQL analysis.
- Created a technical curriculum focused on data modeling and backend logic for DeFi applications.
